

This setup turns a static list of links into a functional marketing engine for the [[Siem Reap March 2026]] retreat.

Here is a list of what we **can and should** do to get the most out of this Obsidian vault:

1. Track Outreach Progress (The "Should" Do)

- **Update Statuses Daily:** As soon as a post is made in a group, change the **status:** from **To Review** to **Completed**. This keeps your **Outreach Dashboard** clean and prevents you from accidentally double-posting in the same community.
- **Use the Outreach Log:** Check off the tasks within each note (e.g., "Research Group Rules," "Post Published") to ensure you are following the specific guidelines of each community.
- **Log Engagement:** If a specific post gets a lot of comments or "likes," note that down in the group's file. This helps you identify which "nodes" in your network are the most active for future retreats.

2. Manage Leads and Contacts (The "Can" Do)

- **Create "Person" Notes:** If you meet a high-value lead or a local influencer in a group, create a new note for them (e.g., [[Name of Person]]) and link it to the group note where you found them.
- **Store Ad Copy:** Create a folder called **Marketing Assets** and store your best-performing captions or images there. You can then link these assets to the groups where they were used to see what content works best in which region.

3. Visualize Your Network (The "Should" Do)

- **Monitor the Graph View:** Use the color-coded graph to see your "coverage". If you see a large cluster of **Red dots** (To Review) in the **NSW** (Blue) area, you know exactly where to focus your energy for the next hour.
- **Identify Gaps:** If you notice you have many groups in **Sydney** but almost none in **Perth** or **Adelaide**, you can search for new groups to add to the **Other_States** folder to balance your reach.

4. Centralize Logistics (The "Can" Do)

- **Link to the Master Plan:** You can create a note for the [[Siem Reap March 2026]] retreat itself and link every group note to it. This creates a "backlink" profile, showing you every single digital platform that is currently "pointing" toward your event.
- **Platform Management:** Use the **02_Platforms** folder to store your login reminders or specific "Update" schedules for sites like **Retreat Guru** or **TripAdvisor**.

5. Team Collaboration (The "Should" Do)

- **Use Shared Notes:** If you are using a shared drive, use the bottom of each group note to leave "Internal Comments" for your teammate (e.g., "This group is very strict about links, use an image instead").
- **Dashboard Sync:** Check the **Outreach Dashboard** every morning to see what your teammate has completed while you were away, ensuring you aren't overlapping work.
